

Emergency Siren Test Schedule

Siren system diagnostics and communications testing are performed on a routine basis both through automated systems, and via manually initiated system tests. The sirens are monitored 24 hours a day to ensure proper operation.

While much of the testing is performed silently, the following dates have scheduled audible siren tests. The tests will activate each siren either at full operating volume, or at a low growl to test siren components. Notifications will be sent out to the public in advance of the audible tests through the news media, DEMA website, and DEMA social media communications on Facebook and Twitter.

Audible Siren Test Dates:

Tuesday, October 10, 2017	(AM activation test)
Tuesday, January 9, 2018	(AM activation test)
Tuesday, April 10, 2018	(PM activation test)
Tuesday, July 10, 2018	(PM activation test)
